

Morgan Metz

Charlottesville, Virginia • morgan.metz@eyekon.xyz • +1 (434) 260-9485 • [Github](#) • [LinkedIn](#)

Blockchain and systems engineer specializing in Solana smart contracts, platform security, and high-TVL infrastructure. Shipped contracts securing \$30M+ in value and owned security for a full platform relaunch.

Experience

[Avo](#) — Software Engineer | Remote | Apr 2026 – Present

- Rebuilt Avo's core infrastructure for its v3 launch
- Wrote Anchor smart contracts responsible for over \$30M in platform TVL
- Built observability, metrics, and error handling for a highly distributed system at scale
- Owned platform security for the v3 launch; audited all services, contracts, and endpoints, and introduced internal access controls to contain lateral movement in the event of a breach

[Hydex](#) — Software Engineer | Remote | Dec 2025 – Aug 2026

- Helped architect the core structure for the off-chain and MPC integrations powering the hySOL LST
- Delivered security and efficiency improvements to Hyidentity and the Hydex Router
- Spearheaded design and implementation of the Hydex Name Service — a fully on-chain, stateless, encrypted naming service on Solana

[CargoLabs](#) — Software Engineer (Contractor) | Charlottesville, VA | Apr 2024 – Aug 2024

- Built insurance-purchasing APIs handling over \$100K in transactions
- Built and managed CI/CD pipelines, AWS Lambda functions, Vercel deployments, and databases

[Stakit Systems](#) — Software Engineer (Contractor) | Remote | Dec 2023 – Aug 2024

- Deployed staking smart contracts across 7 chains, plus APIs to manage user data and funds
- Contributed to front-end development and performance tuning for scaled distributed systems

[DegenDevs](#) — Contractor | Remote | Jul 2022 – Dec 2025

- Built web apps, smart contracts, and dev tooling on Solana, Cosmos, and EVM
- Managed databases, REST APIs, Lambda functions, and NGINX services/proxies
- Clients: [LaunchMyNFT](#), [Ultra Markets](#), [Unison Wallet](#), [EYEKON](#), [PRMR](#), [Eon Labs](#), and more

Projects

[SolChess](#): P2P chess app for betting SOL and USDC on Elo rated games, with in-house house bots. Engine, processing, UI, rating, and anticheat all built from scratch.

[SandwichRelay](#) MEV research project: a Jito-relayer fork that detects sandwich-attack vectors by parsing swap transactions from major providers and analyzing their slippage. Built the target-swap analysis contracts, transaction-building logic, and a custom step in the Transaction Processing Unit to demonstrate and study on-chain MEV exposure.

[Nebula](#): Fully open-source NFT marketplace on CosmWasm supporting stateless collection management, minting, and exchange. Handled \$75K+ TVL in under three months.

Open Source: [Zed](#), [Soldiers](#), github.com/interactions-py/interactions.py, [Fusion Core Finance](#)

Skills & Interests

Technical: Rust, TS/JS, Python, Go, SQL, React, OpenAPI, Postgres, EVM/SVM/CWVM, Docker, ORMs

Awards & Certifications: Highest score in Virginia for Cyberstart America CTF, SANS SEC275, CS50
