MORGAN METZ

morgan.metz@eyekon.xyz (434) 260-9485 github.com/morgandri1 linkedin.com/in/morgandri1

PROFILE

18-year-old blockchain and systems engineer: Solana smart contracts, platform security and high-TVL infrastructure. Shipped contracts securing $30M+, owned security for a full platform relaunch, and started two companies: one acquired, one acqui-hired.

EXPERIENCE

Apr 2026 – Present — Avo · Software Engineer

- Rebuilt Avo's core infrastructure for the v3 launch
- Wrote the Anchor smart contracts holding $30M+ in platform TVL
- Built observability, metrics and error handling across a distributed system
- Owned platform security for v3: audited every service, contract and endpoint; added internal access controls to contain lateral movement

Dec 2025 – Aug 2026 — Hydex · Software Engineer

- Helped architect the off-chain and MPC integrations powering the hySOL LST
- Shipped security and efficiency fixes to Hydentity and the Hydex Router
- Designed and built the Hydex Name Service: on-chain, stateless, encrypted

2023 – 2024 — Nebula · Founder, acquired by Talis

- Open-source NFT marketplace on CosmWasm; $75K+ TVL within three months

Jul 2022 – Feb 2023 — Copperhead Software · Co-founder, acqui-hired by EYEKON

- Three-person contract development shop, started with two friends

Apr 2024 – Aug 2024 — CargoLabs · Software Engineer, contract

- Built insurance-purchasing APIs handling $100K+ in transactions
- Owned CI/CD, AWS Lambda functions, Vercel deployments and databases

Dec 2023 – Aug 2024 — Stakit Systems · Software Engineer, contract

- Deployed staking contracts on 7 chains and the APIs for user data and funds
- Front-end work and performance tuning for distributed systems at scale

Jul 2022 – Dec 2025 — DegenDevs · Contractor

- Web apps, smart contracts and dev tooling on Solana, Cosmos and EVM
- Databases, REST APIs, Lambda functions and NGINX services
- Clients: LaunchMyNFT, Ultra Markets, Unison Wallet, EYEKON, PRMR, Eon Labs

PROJECTS

SolChess — P2P chess for SOL and USDC on Elo-rated games, with in-house bots. Engine, matchmaking, UI, rating and anticheat built from scratch.

SandwichRelay — MEV research: a Jito relayer fork that detects sandwich attacks by parsing swaps from major providers and analyzing slippage. Built the analysis contracts, transaction builder and a custom TPU step to study on-chain MEV exposure.

Open source — Zed, Solders, interactions.py, Fusion Core Finance

SKILLS

Rust, TypeScript/JavaScript, Python, Go, SQL, React, OpenAPI, Postgres, EVM/SVM/CWVM, Docker, ORMs

AWARDS

Highest Cyberstart America CTF score in Virginia · SANS SEC275 · CS50
